

Thank you for looking at a preview of my ***Chalkspot Free Alphabet/Number Grid Charts for Primary Grades***. My charts have been enlarged for ease of viewing and created using the Open Dyslexic Font (www.opendyslexic.org). I found these charts were very useful in my primary grade classrooms specifically for students who were consistently showing reversals of letters and numbers in their writing. They found it easier to read the charts when working with letter formation and math computation with the Hundreds Grid. The number grid has been split into six parts (0-300). The numbers are colored by place value. The alphabet chart has also been split into two parts. I copied each section on the front and the back of oaktag paper. Then I laminated the charts.

Thank you,

Trista L. Pollard NBCT
